

How To

CREATE THE SALMON OF KNOWLEDGE

Get Started

WHAT YOU'LL NEED

PM216
String

PD367B
X4 Standard Acryl 20ml Tubes

CR335
Natural Round Sticks

PM066B
Crayola Model Magic

CR101AXXX
Large Glitter Tub

Using air drying clay or Model Magic, make a model of the fisherman Finegas sitting at the side of the river trying to catch the legendary salmon.

Then make a fishing rod for Finegas. You can use a simple twig from the garden or a length of wooden dowelling. Simply tie some string around the top and attach the handle to your model by moulding Finegas' hands around the twig or stick.

You'll need to make a clay salmon for Finegas to catch. Using your clay, mould a fish shape which will fit into your jam jar. When the clay on both of your models is dry, decorate using readymixed or acrylic paint, and make your salmon extra special by adding gold glitter.

Now you'll need a jam jar to create your fishy river scene. For the river, we've used some blue film, scrunched it up and pushed it into the bottom of the jar. You could also use some ordinary blue paper, or just paint some white paper with blue paint. Paint the lid of your jar green to represent the banks of the River Boyne.

Finally add your own Salmon of Knowledge to the river in the jam jar and put on the lid. Glue Finegas to the top of the jam jar so he's poised and ready to fish!

Tip!
Get the class involved with this great legend and ask them to bring in a jam jar each so they can create their own Salmon of Knowledge scene!
